

Cutaneous Drug Reactions

(Weedon Chapter 20)

Paul K. Shitabata, M.D.
Dermatopathology Institute

Pertinent histopathologic patterns associated with halogenodermas include all except:

- A. Chromoblastomycosis
- B. Sporotrichosis
- C. Squamous cell carcinoma
- D. Blastomycosis
- E. Dermatitis herpetiformis

Answer E

Histopathological reaction pattern associations

Drug	Histopathology
Protease inhibitors	Pseudolymphoma
GCSF	Lipodystrophy
Lithium	Urticaria
Phenytoin	Neutrophilic dermatosis
NSAIDS	Acneiform eruption

Answers

Drug	Histopathology
Protease inhibitors	Lipodystrophy
GCSF	Neutrophilic dermatosis
Lithium	Acneiform eruption
Phenytoin	Pseudolymphoma
NSAIDS	Urticaria
