

Dermatopathology

Differential Diagnosis

Proliferation Downward from Epidermis

Paul K. Shitabata, M.D.
Dermatopathology Institute

Must Know Diseases

Disease	Differentiating Traits
Fibroepithelioma of Pinkus	Strands of basaloid epithelium in fibrovascular stroma
Fibrofolliculoma	Hair follicle with adjacent fibrotic stroma and reticulated epithelium
Inverted follicular keratosis	Squamous eddies
Nevus sebaceus of Jadassohn	Proliferation of epidermis connecting to sebaceous lobules and basaloid proliferation
Poroma	Uniform blue cells with interspersed ducts
Trichilemmoma	Pale/clear keratinocytes with peripheral palisading and thickened basement membrane
Tumor of follicular infundibulum	Pales cells in columns with windows of dermis in between

Rarer Diseases
