What is the best diagnosis?

A. Tubular adenoma
B. Metastatic adenocarcinoma
C. Hidradenoma papilliferum
D. Adenoid basal cell carcinoma
E. Syringocystadenoma papilliferum
Syringocystadenoma papilliferum
Invaginating glands connected to epidermis

Cysts lined by apocrine epithelium with minimal to absent atypia

Mature Plasma cells
Spitz Nevus
Circumscribed proliferation of epithelioid and spindled melanocytes

Rare superficial mitotic figures

Kamino Bodies

Melanocytic maturation
What is the best diagnosis?

A. Trichilemmal Carcinoma
B. Keratoacanthoma
C. Porocarcinoma
D. Hidradenocarcinoma
E. Halogenoderma
Keratoacanthoma
Crateriform surface
Intraepidermal abscess
Glassy keratinocytes
Minimal cytologic atypia
Regressed Keratoacanthoma
Remnant of crateriform architecture

Lichenoid inflammatory infiltrate

Keratin granuloma

Scar
What is the best diagnosis?

A. Myxoid liposarcoma
B. Myxoid malignant fibrous histiocytoma
C. Schwannoma
D. Myxoma
E. Lipoblastoma
Lipoblastoma
Circumscribed soft tissue tumor

Lipoblasts

Variable Cellularity
Myxoid background
