Synaptophysin
Merkel Cell Carcinoma
Hyperchromatic cells with nuclear molding and stippled nuclear chromatin

Paranuclear Dot-like positivity with Cytokeratin stains
Dermatofibroma with Sclerosing Hemangioma Features
Spindle cells with Touton-type Giant Cells

Hemorrhage and hemosiderin macrophages

Spindle Cells

Entrapping Collagen
Verruca Plana
Superficial Koilocytes

Minimal Cytologic Atypia

Minimal to absent Papillomatosis
Leukocytoclastic Vasculitis
Must have Fibrinoid Necrosis

Extravasated rbc's

Nuclear Dust
Sebaceous Adenoma
Circumscribed lobules of mature sebaceous lobules

Basal layer surrounding sebocytes

Minimal Atypia

Circumscribed lobules of mature sebaceous lobules
