Juvenile Xanthogranuloma
Pearls

- Nodule of foamy histiocytes (look for bubbly cytoplasm)
- Should have numerous Touton-type giant cells
- Minimal chronic inflammation
Grover’s Disease
Pearls

- Acantholytic dyskeratosis with mixed pattern (in this case corp ronds and corp grains with suprabasilar acantholysis)

- Frequent scale crust

- Usually minimal eosinophils
Chondroid Syringoma
(Benign Mixed Tumor of the Skin)
Pearls

- Deep tumor with ducts of varying size
- Mucinous stroma
- May or may not have chondroid (this case does)
Nevus Sebaceous
Pearls

- Acanthosis
- Sebaceous glands attached directly to epidermis
- May have underlying apocrine glands
Fibroepithelioma of Pinkus
Pearls

- Thin anastomosing strands of basaloid cells creating a fenestrated appearance
- Look for stromal-tumor clefting and myxoid stroma
