Accessory Breast Tissue
Pearls

- Benign breast glandular tissue extending into dermis
- If associated with smooth muscle bundles, consistent with accessory nipple
Melanoma with Spitzoid Features
Pearls

- Broad and asymmetrical melanocytic proliferation
- Epithelioid and spindled melanocytes
- No maturation and solid cohesive growth to base
- Look for mitotic figures in base of lesion
Post-Inflammatory Pigmentary Alteration (Ashy Dermatosis)
Pearls

- Superficial Perivascular dermatitis with melanophages
- Rule out macular amyloidosis
- Clinical-pathological correlation
Nevus Lipomatosis
Pearls

- Epidermal hyperplasia with papillomatosis
- Mature adipose tissue extending into papillary dermis
Chondroid Syringoma
(Benign Mixed Tumor of the Skin)
Pearls

- Circumscribed cellular tumor with solid areas mixed with cysts and ducts
- Look for mucin and cartilage
