Dermatopathology Slide Review Part 56

Paul K. Shitabata, M.D.
Dermatopathology Institute
Verruca plana (Flat wart)
Pearls

- Slightly papillomatosis epidermal outline
- Superficial koilocytes
- Minimal parakeratosis
- Lacks inward bending of rete ridges of classic verruca vulgaris
Glomangioma
Pearls

- Nodular and cellular dermal tumor with ectatic vascular spaces
- Round to oval cells with "fried egg" appearance
- Minimal to absent atypia
Metastatic Malignant Melanoma
Pearls

- Expansile nodule of malignant melanocytes
- Minimal to absent junctional activity
- Dermal component larger than junctional component
- May need IHC to confirm diagnosis
Linear IgA Disease-Childhood Variant
Pearls

- Subepidermal vesicular to bullous dermatosis
- Papillary dermal edema with fibrin and neutrophils
- Some cases may have eosinophils
- Confirm with DIF
