What is the best diagnosis?

A. Incontinentia pigmenti
B. Sweet’s syndrome
C. Dermatitis herpetiformis
D. Bullous pemphigoid
E. Erythema chronicum migrans
Dermatitis herpetiformis
Pearls

- Papillary dermal microabscesses with neutrophils coalescing to form vesiculo-bullous changes
- No vasculitis, interface dermatitis, or acantholysis
- Variable eosinophils
- DIF to confirm and differentiate from histologically identical Linear IgA disease
Basal Cell Carcinoma with Amyloid
Immunohistochemistry
CD4 negative
CD8 positive
CD56 positive

T-cell receptor gene rearrangement
Gamma-delta rearrangement
Cutaneous T-cell Lymphoma
CD56 positive with Gamma-Delta rearrangement
Overlap Lichen Sclerosus and Morphea (inflammatory phase)
Lobular Carcinoma of the breast, Metastatic to the Skin
