What is the best diagnosis?

A. Eccrine spiradenoma
B. Extra-thoracic thymoma
C. Cutaneous lymph node
D. Cutaneous pseudolymphoma
E. Follicle Center B-cell lymphoma
Cutaneous Lymph Node
Pearls

- May be incidental finding
- Circumscribed collection of lymphoid cells with variable germinal centers and sinus histiocytosis
- Must see sub-capsular sinus to establish a true lymph node and not a reactive lymphoid hyperplasia
