Colloidal Iron
What is the best diagnosis?

A. Scleromyxedema
B. Scleredema
C. Scleroderma
D. Granuloma annulare
E. Necrobiosis lipoidica
Granuloma Annulare
Pearls

- Dermal necrobiosis with mucinous degeneration rimmed with histiocytes, giant cells, and lymphocytes
- May confirm mucin with colloidal iron or Alcian blue/PAS
- Plasma cells rare
- Usually expansile nodule that may extend into deep reticular dermis
- DDX: Necrobiosis lipoidica
