What is the best diagnosis?

A. Lichen amyloidosis
B. Macular amyloidosis
C. Acral fibrokeratoma
D. Glomus tumor
E. Nevus sebaceus
Lichen amyloidosis
Pearls

- Irregular epidermal hyperplasia with hyper- and parakeratotic scale
- Dermal papillary fibroplasia with hyaline deposits
- May have scattered melanophages
- Amyloid stains (eg Congo red) may not be positive in cutaneous keratin-derived amyloid
