What is the best diagnosis?

A. Sarcoidosis
B. Lupus vulgaris
C. Granulomatous slack skin disease
D. Actinic granuloma
E. Blastomycosis
Lupus vulgaris
Pearls

- Clinical-pathological correlation
- Caseating granulomas
- Special stains (AFB, PAS, GMS) negative
- History of TB exposure or disease, considered a tuberculid reaction
- DDX: Granulomatous rosacea, perioral dermatitis
