What is the best diagnosis?

A. Granuloma annulare
B. Inflammatory morphea
C. Scleromyxedema
D. Scleredema
E. Necrobiosis lipoidica
Inflammatory Morphea
Pearls

- Superficial and deep perivascular and interstitial mixed cell dermatitis with lymphocytes and plasma cells
- Variable degree of dermal sclerosis depending upon stage of disease
- May show “square biopsy” sign
- Inflammation may extend into subQ fat.
