What is the best diagnosis?

A. Langerhans cell histiocytosis
B. Cutaneous Mastocytosis
C. Anaplastic large cell lymphoma
D. Chronic lymphocytic leukemia
E. Mycosis fungoides
Mycosis fungoides
Pearls

- Atypical lymphocytes with hyperconvoluted nuclear contours and nuclear enlargement
- Pautrier microabscesses—intraepidermal collections of atypical lymphocytes with minimal spongiosis
- Confirm by CD4+ and usually CD5 and CD7 negative
