What is the best diagnosis?

A. Mycosis fungoides
B. Langerhans cell histiocytosis
C. Urticaria pigmentosa
D. Diffuse large B-cell lymphoma
E. Lymphomatoid papulosis
Mycosis fungoides
Pearls

- Atypical intraepidermal lymphocytes with hyperchromatic and hyperconvoluted nuclear contours
- May have perinuclear halos
- Pautrier microabscesses with intercalation of basal keratinocytes with atypical lymphocytes
- Confirm with IHC
- Confirm with clinical presentation
