What is the best diagnosis?

A. Erythema multiforme
B. Lymphomatoid papulosis
C. Graft versus host disease
D. Mycosis fungoides
E. Anaplastic large cell lymphoma
Mycosis fungoides
Pearls

- Intraepidermal proliferation of atypical lymphocytes with hyperchromatic and hyperconvoluted nuclear contours
- Intercalation with basal keratinocytes
- Pautrier microabscesses with minimal spongiosis
- Most common immunophenotype CD4+/CD7-
- Rule out lymphomatoid drug eruptions
