What is the best diagnosis?

A. Verruca vulgaris
B. Squamous cell carcinoma
C. Basaloid squamous cell carcinoma
D. Darier’s disease
E. Hypertrophic discoid lupus erythematosus
Penile Intraepithelial Neoplasia (PeIN), Differentiated Type (Squamous Cell Carcinoma of Penis)
Pearls

- New diagnostic classification for squamous epithelial tumors (previously included erythroplasia of Queyrat)
- Full thickness replacement of squamous mucosa, akin to Bowen’s disease
- If well differentiated keratinocytes, designate differentiated type. Basaloid or crowded cells have designated undifferentiated type
