What is the best diagnosis?

A. Secondary syphilis  
B. Leishmaniasis  
C. Mycosis fungoides  
D. Diffuse large B-cell lymphoma  
E. Plasmacytoma
Plasmacytoma
(Cutaneous Marginal Zone Lymphoma)
Kappa light chain
Lambda light Chain
Pearls

- Diffuse and nodular collection of plasma cells
- May be in varying stages of maturation
- Always rule out inflammatory condition which may mimic neoplastic process
- Confirm with light chain and Ig gene rearrangement
- Clinical-pathological correlation, rule out systemic plasma cell dyscrasia with secondary involvement of skin
