What is the best diagnosis?

A. Gouty tophus
B. Rheumatoid nodule
C. Necrobiosis lipoidica
D. Sarcoidosis
E. Epithelioid sarcoma
Rheumatoid nodule
Pearls

- Palisading necrobiotic granuloma, usually localized in reticular dermis
- Surrounded by epithelioid histiocytes and giant cells with minimal atypia
- Polarization negative for refractile particles
- DDX: Foreign body, Need AFB, FITE, PAS/GMS to rule out infection
